MBA教育起源于美国。一般认为，美国最早的管理学院是1881年在美国宾西法尼亚大学(University of Pennsylvania or UPenn)设立的The Wharton School of Finance and Economics，而工商管理硕士培训计划(MBA program)要晚些，大约于1908年诞生于哈佛大学，到现在已经有近100年的历史。

协作2.0

Robin Hastings

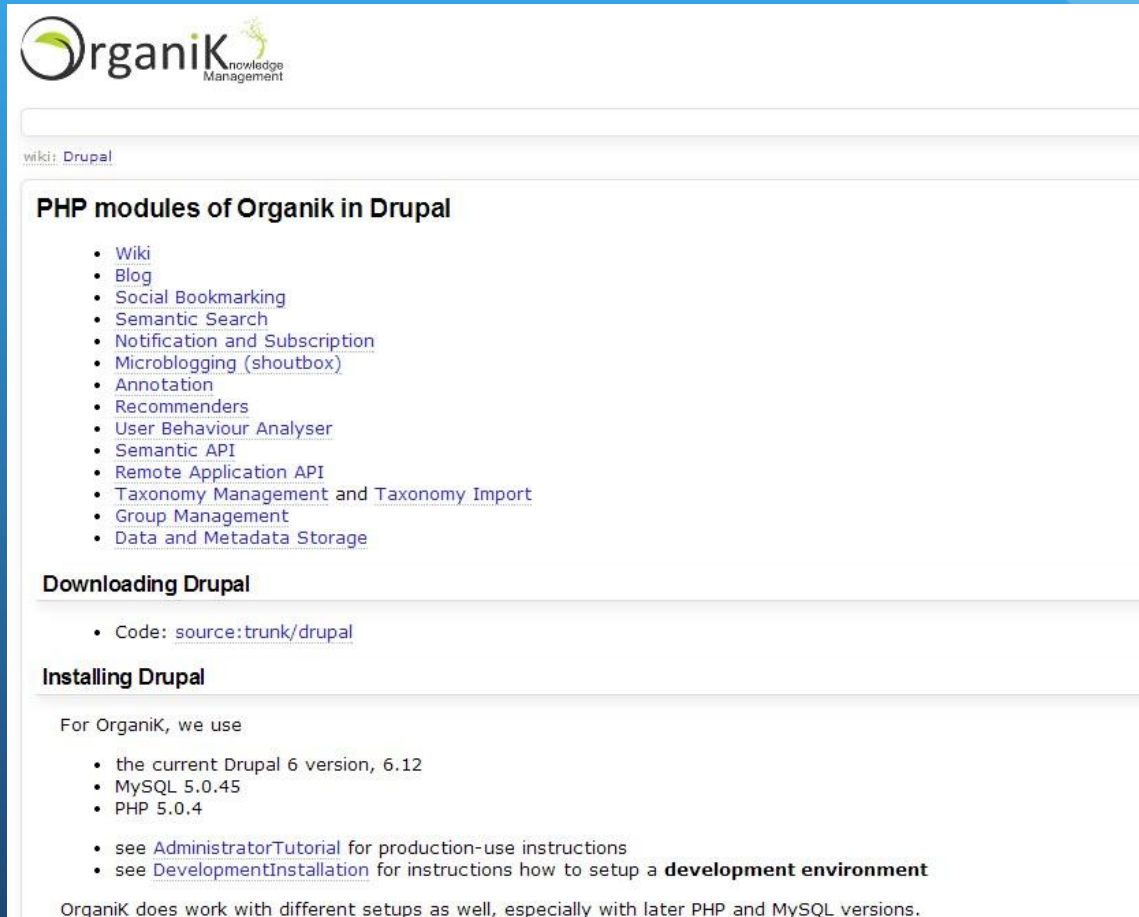

摘要

一些信息技术经理和管理人员阻止员工访问社交网络如Facebook、MySpace或其他社会工具, 如博客, 他们因为担心工作人员花费过多的时间更新他们的个人资料和评论, 而没有足够的时间工作。本报告的目的是使图书馆的管理人员鼓励他们的职员在组织内部和外部进行广泛的协作,

协作2.0

。当一个图书馆高效的利用社交工具时，所产生的生产力远远大于流失的生产力。在这份报告中，读者也会发现图书馆职员实行协作工作可能够承担的、节省金钱和时间的的一些图例数据和具体建议。即使某一图书馆目前没有参与协作工作，工作人员在做日常工作的基础上，可以利用协作平台：如谷歌文件，一个wiki，或一个内部博客来促进沟通。

Drupal vs. .NET

Drupal	.NET
Linux (Free)	Windows Server (收费)
Apache/ <u>Nignx</u> (Free)	IIS
MySQL/ <u>PostgreSQL</u> (Free)	MS SQL Server (收费)
PHP (Free)	ASP/ASPX (收费)

基本没有互联网公司用.NET。

为什么用Drupal

Drupal vs. Java

Drupal

优点:

- LAMP容易部署
- 极高的Web开发效率
- 模块众多
- 庞大的开发者社区（英文）

缺点:

- 开发人员数量少
- 学习曲线陡

Java

优点:

- 开发人员数量多
- 金融等大型企业级应用
- 强大的搜索引擎[Lucene/Solr](#)
- 基于[Hadoop](#)的大数据处理

缺点:

- 部署繁琐
- Web开发效率低
- 图书馆可以用到的组件少

为什么用Drupal

- 根据需求选择平台
- **Drupal+Solr**是非常流行的组合

Posted by [arthurf](#) on *January 30, 2008 at 5:40am*

This is a helper/configuration module to work with [JW media player FLV flash player](#). It is designed for integration with XSPF Playlist to make it easier for configuration and setup. To use this, you need to download the player and place it in this module directory. You can then configure the display options you want.

This module has support for recommendations and integrates with views to allow administrators to select what kinds of content they want to recommend after a video has been watched. This module also integrates with [Trackit](#) and [XSPF Playlist](#) for tracking and playlists. This module also integrates with Views to provide recommended content via special views created by an administrator. This module will produce embedded code for users to insert your video onto their site. Recommended content as well as playlists are supported in the embedded code. Additionally, this module can create an external configuration file which allows the administrator to change content as well as display options to already embedded players.

- A theme_jw_player function for general use.
- Uses Libraries module for the JW Library itself and any skins (drop skins into sites/all/libraries/jwplayer_skins).

This module is for Drupal 7 only (unless there is a

It includes a 'Preset name' field with the value '720p', a 'Machine name' field with the value '720p_001', and a 'Description' field containing the text 'This is a sample preset to demo the functionality.'. Below these fields is a 'Settings' section with a 'Skin' dropdown menu set to 'Modern', a 'Width' field set to '1280' pixels, and a 'Height' field set to '720' pixels. Video.js (HTML5 Video Player)

[View](#) [Version control](#)

Posted by [heshan.lk](#) on *October 31, 2010 at 8:58am*

Video.js is a HTML5-based video player with a built-in Flash fallback for older browsers. This means that videos can be played on nearly all devices and operating systems, provided the right codecs are used.

This module is a support module for Video.js. It doesn't contain Video.js itself, but integrates it with the File, Link and Video modules after you've installed it.

New in version 7.x-3.x

- Support for Video.js 4.0.0.
- Support for subtitle tracks.
- Support for looping, hiding player controls and changing preload behavior.
- Setup above settings for each field and view individually, as well as width and height of the player.
- Load the Video.js files from the Video.js CDN - downloading and installing the player is no longer necessary!
- Locate the Video.js files using the [Libraries API](#).

ADAPT.JS - ADAPTIVE CSS **CUSTOM CSS GENERATOR** **GRID OVERLAY BOOKMARK**

Essence	Dimensions	Purpose
The 960 Grid System is an effort to streamline web development workflow by providing commonly used dimensions, based on a width of 960 pixels. There are two variants: 12 and 16 columns, which can be used separately or in tandem. Read more .	The 12-column grid is divided into portions that are 60 pixels wide. The 16-column grid consists of 40 pixel increments. Each column has 10 pixels of margin on the left and right, which create 20 pixel wide gutters between columns. View demo .	The premise of the system is ideally suited to rapid prototyping, but it would work equally well when integrated into a production environment. There are printable sketch sheets, design layouts, and a CSS file that have identical measurements.
